Application/Control Number: 10/519,961

Art Unit: 1724

Specification

The abstract of the disclosure is objected to because legal phraseology "comprises" is used in the abstract. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-8, 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taub (5,795,369).

Taub discloses an air purifying device (300) comprising a hollow cylindrical filter (302) made by forming a filter media (326) in a cylindrical shape having an air passage in the central hollow portion, an intake member (304) having an intake hole (318) on the end of the cylindrical filter (302) so that the hole communicates with the air passage (see Figs. 6 & 7, col. 9, line 59 through col. 10, line 21). The cylindrical filter (302) further has a cap (330) fixed on the end of the hollow cylindrical filter (302). Taub further discloses a supporting rod (46) with which the intake member and the cap are coupled at both ends of the supporting rod (46) in the air passage (see 46 in Fig. 2, col. 7, line 60 through col. 8, line 12). Taub also discloses the air intake member (304) constructed as a box having a passage for air inside it and having holes to be inserted of each of the cylindrical filter (see Fig. 6), and mulitiple hollow cylindrical filter (302) positioned in parallel and each being made by forming a filter media (326) in a

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-8, 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taub (5,795,369).

Taub discloses an air purifying device (300) comprising a hollow cylindrical filter (302) made by forming a filter media (326) in a cylindrical shape having an air passage in the central hollow portion, an intake member (304) having an intake hole (318) on the end of the cylindrical filter (302) so that the hole communicates with the air passage (see Figs. 6 & 7, col. 9, line 59 through col. 10, line 21). The cylindrical filter (302) further has a cap (330) fixed on the end of the hollow cylindrical filter (302). Taub further discloses a supporting rod (46) with which the intake member and the cap are coupled at both ends of the supporting rod (46) in the air passage (see 46 in Fig. 2, col. 7, line 60 through col. 8, line 12). Taub also discloses the air intake member (304) constructed as a box having a passage for air inside it and having holes to be inserted of each of the cylindrical filter (see Fig. 6), and mulitiple hollow cylindrical filter (302) positioned in parallel and each being made by forming a filter media (326) in a

cylindrical shape having an air passage in the central hollow portion. Claims 1-8, 19 and 20 differ from the disclosure of Taub in that the device has two air intake members instead of only one. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide two air intake members, each at each end of the filter element, instead of only one, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. <u>St. Regis Paper</u> Co. v. Bemis Co., 193 USPQ 8.

Claims 9-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taub (5,795,369), as applied supra, in view of the Japanese reference (JP 57-134520).

Claims 9-18 call for the casing having a slit with guide plates furnished on both sides of the slit. The Japanese reference discloses an air purifying device (1) with an air intake (2) comprising a slit (3) with guide plates furnished on both sides of the slit (3) (see Fig. 1). It would have been obvious to a person having ordinary skill in the art at the time the invention was made to provide a slit with guide plates as taught by the Japanese reference in the air purifying device of Taub since the configuration of the slit with guide plates would provide uniform distribution of the air flow therethrough. Claims 11-18 call for two slits instead of one. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide two slits, instead of one slit, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. St. Regis Paper Co. v. Bemis Co., 193

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Minh-Chau T. Pham whose telephone number is (571) 272-1163. The examiner can normally be reached on Mon/Tues/Thur/Fri 7:00 am - 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duane Smith can be reached on (571) 272-1166. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
